

Autonomous Agentic MLOps — Run Summary

Dataset Target	data/customer_churn_messy.csv (Target: Churn)
Pipeline Status	SUCCESS ■
Debugger Retries	0

1. Dataset Profiling Summary

- **Dimensions:** 403 rows, 11 columns

2. LLM Transformation Strategy

Data Cleaning:

- *convert_numeric_strings* (Tenure_Months, Monthly_Charges, Support_Calls, Monthly_Usage_GB, Satisfaction_Score): Convert string representations of numeric values to float.
- *impute_missing_values* (Age, Tenure_Months, Monthly_Charges, Support_Calls, Monthly_Usage_GB, Satisfaction_Score, Contract_Type, Payment_Method, Internet_Service): Impute numeric columns with median and categorical columns with mode.
- *drop_unnecessary_columns* (Customer_ID): Remove identifier column that should not be used as a feature.

Feature Engineering:

- *create_interaction_feature* (Monthly_Charges, Tenure_Months): Generate a new feature representing total spend (Monthly_Charges * Tenure_Months).
- *encode_categorical_variables* (Contract_Type, Payment_Method, Internet_Service): Apply one-hot encoding to categorical columns.
- *scale_numeric_features* (Age, Tenure_Months, Monthly_Charges, Support_Calls, Monthly_Usage_GB, Satisfaction_Score, Total_Spend): Standardize numeric features to zero mean and unit variance.
